

Porcelain dental veneers, are wafer-thin shells of porcelain that are bonded onto the front side of teeth to create a cosmetic or functional improvement to the teeth. Porcelain veneers are routinely sought after by people wanting to make cosmetic changes for teeth that are discolored, worn, chipped, or misaligned.

Porcelain veneers can help you improve your smile by changing the size, color and shape of your teeth. In the past, resin veneers required more work and didn't match teeth as naturally as modern porcelain veneers do today. At Healthy Smiles Dental Care, we are prepared to use the most modern dental veneer techniques to help you achieve your dream smile.

Cosmetic Dentistry is dental treatment that enhances the beauty and health of your smile. Cosmetic Dentistry covers a multitude of procedures: from Smile Whitening to repairing, straightening or replacing teeth. Even the most uneven smiles can be straightened without the need for unsightly, uncomfortable and time-consuming metal braces. Many procedures can be completed in one to three simple visits. Contact us today to learn more about how our dental services can help you.
